

Quick Deployment Status

Fix Applied & Pushed

Commit: `be42a9f`

Message: "Fix: Remove yarn.lock symlink and .yarnrc.yml to force npm on Vercel"

Pushed: Yes, to GitHub main branch

Time: Just now

What Was Fixed

The issue was that Vercel was trying to use `yarn install` but the `yarn.lock` file was a symlink that only exists locally. This caused the error:

```
ENOENT: no such file or directory, open '/vercel/path0/nextjs_space/yarn.lock'
```

Solution:

-  Removed `yarn.lock` symlink from `nextjs_space/`
 -  Removed `.yarnrc.yml` from `nextjs_space/`
 -  Kept `package-lock.json` (tells Vercel to use npm)
-

What Happens Now

Vercel will automatically:

1. Detect the new commit (within 30 seconds)
2. Start a new build using **npm** instead of yarn
3. Run `npm ci` to install dependencies
4. Run `npm run build` to build the app
5. Deploy to <https://app.genesisprovenance.com>

Expected Time: ~10 minutes total

Monitor Progress

Vercel Dashboard

<https://vercel.com/dashboard>

Look for deployment with commit message:

```
Fix: Remove yarn.lock symlink and .yarnrc.yml to force npm on Vercel
```

Expected Build Output

```
✓ npm ci
  Installed 1376 packages in 45s

✓ npm run build
  Compiled successfully
  71 routes generated

✓ Deployment Ready
  https://app.genesisprovenance.com
```

✓ Verify After Deployment

1. **Homepage:** <https://app.genesisprovenance.com>
 - Should load login page (no 404)
2. **Login:** john@doe.com / password123
 - Should redirect to /dashboard
3. **Navigation:** Test all sidebar links
 - Dashboard, Vault, Analytics, Team, Settings, Admin

🎯 Success Checklist

- [] Vercel build shows `npm ci` (not `yarn install`)
- [] Build completes without errors
- [] Deployment shows "Ready"
- [] Homepage loads (no 404)
- [] Login works
- [] Dashboard loads
- [] All navigation works

Status: ✓ Fix pushed, Vercel building

ETA: ~10 minutes
